

# Longreach

## Bridges

Economical structure for either single span bridge requirements with spans of 15 – 40m. The Longreach is identified by trusses which form the main girders which typically sit alongside the deck-line. The superstructure consists of girder trusses, cross members, joists and bracing. Depending on the structure application there are various handrail options to run within the trusses.

### Materials:

- Substructure: Concrete footings / Timber / Steel / Concrete Piles
- Superstructure: Steel / timber / FRP
- Decking: Timber / FRP / Composite / Concrete
- Balustrade / Embellishments: Gal / Painted / Stainless / Timber
